

Pareiq

8 band parametric EQ

- 1: Select 2/4 pole (only lowcut/highcut)
- 2: Solo selected band
- 3: Invert the EQ (hear only what you add or cut = straight curve will result in silence)
- 4: Band type selection (peak, lowcut, highcut, lowshelf or highshelf)
- 5: Band selection
- 6: Adjust frequency, Q and gain for the selected band
- 7: Open setup screen (select midi control channel, grid resolution, and meter settings)
- 8: Output gain/attenuation
- 9: Output margin indicator – click to reset.
- 10: Panel control buttons (x = close, ^ = on top)
- 11: Open preset list
- 12: Bypass button

Hint:

DoubleClick a band-point to disable/remove that band. DoubleClick elsewhere in the grid to create a new band.

Enjoy :-)
