

# CCmute

CCmute is a Midi event filter.

When a Midi programchange even occurs it mute all Midi Controller events for about 1 sec.

To be as fast as possible an interrupt is called each time a Midi event occurs so it is a good idea to feed only the absolut nessasery events to its input.

Please notice that there are different \*.SYS files for x86 and x64.

Requires WIN xp or higher

For WIN 7 x64:

\_you must disable digital signature at winstartup and

\_you must open SCOPE/XITE application as admin.

Good vibes from
